Helios platform

Helios is an application framework that helps enterprises to manage all of their business applications in one place promptly.

Helios enables our clients to:

- Improve their applications' functionality more efficiently by migrating them to the cloud.
- Shift from single tenant to multitenant subscription and access model in a simplified manner.
- Offer software packages tailored to the customer's need to avoid overhead and increase customer satisfaction.

Your enterprise software in Helios
Your business software completely customized to serve your customer's needs.

Customizations
Helios provides ways to tailor application functions and subscriptions to customer needs.

Business applications
Our clients' cloud & on-prem applications their customers and end-users will use.

- Supporting special price discount conditions
- Helping smooth price change with validity options

Usage monitoring and report

- System heath check for the component statuses
- Usage for application and feature request
- Analytics for utilisation and response times
- User activity and service requests

Helios Implementations

Hanover Cloud

By using Helios, Hanover Displays rebuilt their applications and moved them to Microsoft Azure cloud environment. The purpose of this is to provide different editions of the product, based on customers' needs. This way we were able to speed up subscription management by simplifying package customization.

Implemented applications

- Fleet - Transmodel based asset management
- Transfers - Wireless data updater
- Health - Device status monitoring
- Destinations - Destination sign editor

Parkela Parking

Multitenant parking solutions, supporting on-street mode for Smart Cities and off-street version for office centers, hotels and parking houses with Parkela barriers. End-users can get to their parking spot by using the phone app.

Implemented applications

- Office - Management system for building up parkings
- Reception - Off-street parking management
- WebShop - Client portal for users

Sunsafe

Multitenant beach safe reservation system extended with third party vendor sale functions. Maintenance turns manageable in one place while finances become more transparent from an operator's point of view.

Implemented applications

- Office - Define beach areas & zones
- BeachOffice - Dedicated workspace for beach managers
- Kiosk - Special application for external sale point
